

Anand's Investigation for Strict Traditionalism in India: Digitally Innovation of Novel

Bharti, Research Scholar (English), Shri Khushal Das University, Hanumangarh (Rajasthan).

Abstract

This study explores Anand's investigation of strict traditionalism in India through the emerging perspective of digital innovation and novel technological approaches. Traditionalism in Indian society is closely associated with established customs, cultural practices, social values, beliefs, and inherited knowledge. In the contemporary digital era, these traditional structures are increasingly interacting with technologies such as artificial intelligence, social media, digital archives, virtual platforms, and online learning systems. The study examines how digital innovation can contribute to the preservation, interpretation, documentation, and contemporary presentation of traditional Indian knowledge and cultural practices. At the same time, digital transformation can create new questions concerning cultural authenticity, generational differences, social change, and the adaptation of traditional values to modern circumstances. Anand's investigation provides a conceptual basis for understanding how strict traditionalism may respond to technological developments without completely losing its cultural identity. Digital platforms can make traditional knowledge more accessible to younger generations and create innovative methods for recording oral traditions, literature, art, language, customs, and historical practices. However, responsible digitalization requires attention to accuracy, cultural sensitivity, intellectual property, privacy, and ethical representation. The study suggests that tradition and innovation can coexist when technology is used as a means of preservation and creative reinterpretation rather than simply as a replacement for established practices. This perspective offers a novel framework for examining the relationship between cultural continuity, technological advancement, and social transformation in contemporary India.
